

HALOX® and General Polymer, Inc. drum up corrosion solutions

General Polymer Inc. and HALOX® recently teamed up to combat corrosion in a coating for industrial steel drums. By adding the sol-gel corrosion inhibitor, HALOX® 550 WF to General Polymer's high solids, low VOC coating they successfully enhanced the coating's gloss and achieved radiant thin film corrosion protection. This resilient industrial system is sure to stop corrosion before it starts!

High Solids Alkyd Melamine
96 hrs. Salt Spray
Substrate: Cold Rolled Steel
DFT: 0.6 mils.
